EXPERIENCE

Full Stack Developer Intern, Bengaluru, India **January 2026 - June 2026**

Company: NELO

- Built Python web scrapers to pull grocery pricing data from JavaScript-rendered, anti-bot sites like BigBasket and KPN Farm Fresh, writing separate extraction logic per source so one site breaking didn't affect the others.
- Built an ETL pipeline that cleaned and matched pricing data from multiple scraped sources against the internal product catalog, making accurate competitor-vs-internal price comparisons possible.
- Automated a manual data pull into a scheduled pipeline with retry and error-handling logic, letting it recover from network and parsing failures without manual restarts.
- Fixed data accuracy issues caused by dynamic page loading and inconsistent HTML by adding validation checks, using logging and DOM inspection to debug systematically.

PROJECTS

KrishiMitra – AI-Powered Agricultural Platform | GitHub

Technologies: Django, Python, Twilio, MySQL

- Built a Django backend with REST APIs powering a Twilio WhatsApp bot, handling multi-turn conversations through webhooks so farmers could use it without installing a separate app.
- Built a produce-listing feature that parses free-text WhatsApp messages (e.g. "100 kg tomatoes") to extract item and quantity, then adds them to a live MySQL marketplace table.
- Designed a rules-based system for financial-assistance and government-scheme guidance, keeping eligibility logic separate from the conversation flow so new schemes can be added easily.
- Designed the MySQL schema (users, listings, chat/session state, service records) with Django ORM, structuring it to support multiple concurrent conversations without data conflicts.

Quick Commerce Price Comparison Platform | GitHub

Technologies: Django, MySQL

- Rebuilt scraping and pricing logic from the internship project into a standalone Django service, turning single-purpose scripts into a reusable, maintainable backend.
- Designed a normalized MySQL schema (products, sources, price history) for fast cross-platform search, with indexing based on expected query patterns.

OAuth Setup Pilot | GitHub

Technologies: Python, FastAPI, Jinja2, Groq API

- Built a FastAPI web app that researches official provider docs and generates sourced OAuth setup and approval guides.
- Added live guide generation via Groq plus a source-validated library of 5 provider guides; deployed on Render.

EDUCATION

MVJ College of Engineering (MVJCE), Bengaluru **2023 - 2027**

B.Tech in Information Science and Engineering — CGPA: 9.0

Chrysalis High, Kadugodi, Bengaluru — Senior Secondary (CBSE), Class XII, 85% **2023**

SEA International School, Bengaluru — Secondary (ICSE), Class X, 95.2% **2021**

SKILLS

Programming Languages: Python,Go, MATLAB

Technologies & Frameworks: HTML, CSS, JavaScript, Django, Django REST Framework, Node.js, Express.js, Pandas, NumPy, FastAPI

Database: MySQL, SQL

Tools & BI: Power BI, DAX, Git, GitHub

Core CS: Data Structures & Algorithms, DBMS, OOP, Operating Systems, Computer Networks, System Design

EXTRACURRICULAR ACTIVITIES

- **MUN Society Representative** — organized and led the annual MUN conference at MVJ College of Engineering, including workshops for delegates.
- **Member, Debate Society (DebSoc)** — participated in debating and public speaking activities across college events.
- **Member, MVJCE Incubation Centre** — engaged in entrepreneurship and innovation-driven activities.

ACHIEVEMENTS

- **1st Place — Pixel Genesis, VertechX Hackathon**, for building a decentralized digital document management platform inspired by DigiLocker.
- **1st Place — AI Buildathon, VertechX**, for building an AI-powered mental wellness checker application.
